User Acceptance Testing (UAT) Template

Date	21 October 2026
Team ID	Individual Project
Project Name	StaffSync – Modern Human Resource Management System
Maximum Marks	As specified by the project template

Project Overview

Project Name: StaffSync – Modern Human Resource Management System

Description: StaffSync is a web-based Human Resource Management System built with the MERN stack. It supports role-based HR workflows for Employees, Managers, and HR, including employee profiles, attendance, leave requests and decisions, announcements, training, notifications, and performance-related workflows.

Project Version: v1.0.0 (document version label; update to match the deployed build, if different).

Testing Period: To be filled in by the tester for the actual UAT cycle.

Note: The test cases below are proposed UAT scenarios. Enter actual results and Pass/Fail status only after executing each test in the current build.

Testing Scope

- User registration and login, including validation of invalid inputs.
- Role-based access for Employee, Manager, and HR accounts.
- Employee profile viewing and updating, where supported by the current build.
- Attendance viewing and recording workflows supported by the application.
- Leave application and status tracking for employees.
- Manager leave review and approve/reject workflows, if enabled in the current build.
- HR employee and manager management workflows, if enabled in the current build.
- Announcements and training workflows supported by the current build.
- Performance and notification workflows, where available.
- Protected routes, API authorization, and validation of invalid or unauthorized requests.

Requirements to be Tested

- As an Employee, I want to sign in securely and access only employee features assigned to my role.
- As an Employee, I want to view my profile and use attendance and leave features.
- As an Employee, I want to submit a leave request and see its current status.
- As a Manager, I want to review my team's relevant information and process leave requests where this capability is enabled.
- As HR, I want to manage employee information and HR workflows permitted by my role.
- As an authorized user, I want to access announcements, training, and performance information available to my role.
- As a user, I want clear validation messages when I submit missing or invalid data.
- As an administrator/HR user, I want unauthorized role changes and protected operations to be rejected.

Testing Environment

- Application URL: Enter the local or deployed StaffSync URL used for this test cycle.
- Frontend: React application.
- Backend: Node.js and Express REST API.
- Database: MongoDB (configured database/environment).

- Browser/OS: Record the browser version and operating system used.
- Test accounts: Use test accounts created specifically for UAT. Do not include real passwords or secrets in this document.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Employee registration	1. Open the application. 2. Navigate to registration. 3. Submit valid employee details.	A valid employee account is created and the application shows the expected success/navigation state.	To be recorded	To be recorded
TC-002	Required-field validation	1. Open registration or a relevant form. 2. Leave required fields empty. 3. Submit.	Submission is blocked or rejected with clear validation feedback; no invalid record is saved.	To be recorded	To be recorded
TC-003	Login with valid credentials	1. Open login. 2. Enter a valid test account's credentials. 3. Submit.	User is authenticated and directed to the appropriate role-based page.	To be recorded	To be recorded
TC-004	Login with invalid credentials	1. Enter an incorrect password or unknown test account. 2. Submit.	Login is rejected with a suitable message; protected data is not displayed.	To be recorded	To be recorded
TC-005	Role-based access	1. Sign in using a test role. 2. Attempt to open a route or perform an action reserved for another role.	Unauthorized access is denied by the application/backend.	To be recorded	To be recorded
TC-006	Employee profile	1. Sign in as Employee. 2. Open profile. 3. View or update supported fields and save.	Profile information is displayed and supported changes persist after reload.	To be recorded	To be recorded
TC-007	Attendance workflow	1. Sign in with an authorized test account. 2. Open attendance. 3. Perform a supported attendance action.	Attendance is recorded/displayed correctly according to the current application workflow.	To be recorded	To be recorded
TC-008	Submit leave request	1. Sign in as Employee. 2. Open leave section. 3. Enter valid leave details. 4. Submit.	Leave request is saved and its initial status is shown.	To be recorded	To be recorded
TC-009	Leave form validation	1. Open leave application. 2. Omit required details or enter invalid dates. 3. Submit.	Invalid request is rejected with validation feedback and is not saved as a valid request.	To be recorded	To be recorded
TC-010	Manager reviews leave	1. Sign in as Manager. 2. Open leave applications, if available. 3. Approve or reject a test request.	Decision is saved and the request status is updated for the relevant user.	To be recorded	To be recorded
TC-011	HR employee management	1. Sign in as HR. 2. Open employee management, if available. 3. Perform a supported update.	Authorized employee changes are saved and reflected in the application.	To be recorded	To be recorded
TC-012	Announcements/training	1. Sign in with a role that has access. 2. Open announcements or training. 3. View or perform supported actions.	Available content and actions match the role's permissions.	To be recorded	To be recorded
TC-013	Performance/notifications	1. Open the relevant section if available. 2. View assigned performance or notification records.	Only supported records are displayed and their details are correct.	To be recorded	To be recorded
TC-014	Persistence after reload	1. Create or update a test record. 2. Reload or sign in again. 3. Revisit the record.	Saved data persists and remains associated with the correct account.	To be recorded	To be recorded
TC-015	Unauthorized API request	1. Send a request to a protected API without a valid token or with insufficient role access, using an approved test setup.	API rejects the request and does not disclose or modify protected data.	To be recorded	To be recorded

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	To be completed after testing	Record exact steps that reproduce the issue.	Low / Medium / High	Open / In Progress / Closed	Expected vs actual behavior; attach evidence if available.
BG-002	To be completed after testing	Record exact steps that reproduce the issue.	Low / Medium / High	Open / In Progress / Closed	Additional observations or suggestions.

UAT Sign-off

Tester Name: _____

Role: _____

Testing Completion Date: _____

Signature: _____

Project Reviewer / Supervisor: _____

Reviewer Sign-off Date: _____

Notes

- Test both positive scenarios (valid inputs and permitted actions) and negative scenarios (invalid inputs and unauthorized actions).
- Record the actual result and Pass/Fail status only after executing each test case.
- Create a bug entry for each reproducible issue, including steps, severity, status, and expected versus actual behavior.
- Use dedicated test accounts and test data. Do not store passwords, database URIs, JWT secrets, or other credentials in this document.
- Some scenarios are conditional on the feature being present in the current StaffSync build. Mark them Not Applicable if the feature is not implemented or enabled.
- Complete UAT sign-off only after reviewing test results and resolving or accepting outstanding issues.
